Introduction

This document contains the procedure to upgrade GateDefender eSeries from version 5.00.10 to version 5.50.

GateDefender eSeries 5.50 includes major improvements compared to earlier versions, the main ones are:

- **Enhancements in the configuration wizard:** A new network mode has been added to enable the use of outgoing firewall and application control in bridged mode. The wizard has been redesigned, and now shows an initial screen with the three network modes in which the appliance can be set up. The user will be further guided through according to this initial selection.
- **Robust and scalable VPN:** Ability to provide multiple VPNs, with multiplied throughput and very granular access permission control.
- **Application Control:** Ability to identify and block more than 160 applications like Facebook, Skype, Spotify and WhatsApp, safeguarding business productivity.
- **Enhanced reporting** through a user friendly dashboard. It allows administrators to see in a single view a summary of the most important events that are happening in the appliance. It is also possible to drill-down and view each of the categories of events.
- **Real-time network monitoring:** A powerful tool that includes an intuitive interface and graphical representations of the traffic that flows through the Panda GateDefender Appliance.
- **Other improvements:**
 - SMTP proxy domain routing
 - Support for external authentication servers in the hotspot
 - More languages supported in the GUI

Given the wide scope of the version, and with the aim of achieving a smooth upgrade experience, it is recommended to follow the steps described in this guide to upgrade from 5.00.10 version to 5.50.

Backing up the current configuration

The first step is to create a backup of your current installation, so that you can import it after reinstalling the appliance and also as a preventive measure. You can create a backup from System → Backup.

Upgrading from version 5.00.10 to 5.50

This section describes the procedure to upgrade Hardware Appliances, Software Appliances and Virtual Appliances.

Hardware Appliance upgrade

There are two methods to upgrade GD eSeries to version 5.50:

The first and preferred method is the **Image installation**, in other words, reinstalling the system using the 5.50 image that corresponds to the specific model.

The second is the **Package upgrade** method which allows you to upgrade the system from the Panda Perimetral Management Console. This option is recommended for models where image installation is limited due to lack of USB or CD connectors.

Image installation

Image installation is the recommended and preferred method to upgrade to version 5.50. Apart from the new features and improvements already described, the log partition has also been increased to accommodate any logging requirements that our customers may have. For obvious reasons this change can only be accomplished if the image installation method is used.

The image installation option is recommended for the following hardware platforms:

Type of platform	Platform	Image to be used
Legacy	Integra SB	Integra eSoho 5.50 image
Legacy	Performa SB	Integra eSB 5.50 image
Legacy	Performa 8105	eSeries Software appliance image
Legacy	Performa 9050	eSeries Software appliance image
Legacy	Performa Sun 9100	eSeries Software appliance image
Legacy	Performa Nexcom 9100	eSeries Software appliance image
Legacy	Sun 9200	Performa e9500lite 5.50 image
Legacy	Sun 9500	Performa e9500 5.50 image
Legacy	Nexcom 9500lite	Performa e9500 5.50 image
Legacy	Nexcom 9500	Performa e9500 5.50 image
eSeries	Integra eSoho	Integra eSoho 5.50 image
eSeries	Integra eSB	Integra eSB 5.50 image
eSeries	Performa eSB	Performa eSB 5.50 image
eSeries	Performa e9100lite	Performa e9100lite 5.50 image
eSeries	Performa e9100	Performa e9100 5.50 image
eSeries	Performa e9500lite	Performa e9500lite 5.50 image
eSeries	Performa e9500	Performa e9500 5.50 image

You need to burn the corresponding image into a USB drive. Once the HW/Software appliance image is burnt into the USB drive, the appliance needs to be booted from the USB device and the image will be automatically uploaded into the machine. This will be done in an unattended way for Hardware Appliance images, and in an attended way for Software Appliance images.

Please refer to **Annex 1. How to burn HW/Software Appliance USB images into a USB device** to create a bootable USB stick.

Depending on the model, there are some specific details to consider:

Integra SB/Performa SB:

Change the BIOS to boot your appliance from the USB drive:

1. Press the DEL key during startup to access the BIOS
2. Enter the password if you are prompted for it
3. In Advanced Bios Features, change the boot order:

4. In Hard Disk Boot Priority, make sure the USB device occupies the first position.

5. In Integrated Peripherals, enable the keyboard and the USB drives if necessary. Enabling the keyboard will allow you to access the console locally.

6. Reboot your appliance. The image will be automatically installed.

Performa Sun 9500:

The two NVidia network cards must be active in the BIOS so that the network interfaces can be detected. This step should have already been done to install the 5.00.10 version, so most probably it will not be necessary to do it again.

Performa Nexcom 9500lite and 9500:

You must connect the USB stick only after you power on the machine (e.g. 1 or 2 seconds after). After installation, remove the files named /etc/businfotab* and reboot the appliance, this will allow your appliance to correctly get the LAN port configuration from your machine.

Please refer to the **Backup import and machine upgrade** section in this document to check the necessary steps.

Package upgrade

Package upgrade is the recommended option for Integra 300 and Performa 8100 platforms or any other systems you might find more suitable. The procedure to upgrade the packages is the following

The first step will be to access the Panda Perimetral Management Console.

<https://managedperimeter.pandasecurity.com/>

To log in, use your Panda Perimetral Management Console credentials. If you have any questions on this subject, please contact Panda Security Support.

From the Panda Perimetral Management Console, select the System or Systems you want to upgrade. A predefined filter is available to show only upgradeable systems:

A screenshot of the 'Filter' section in the Panda Perimetral Management Console. It includes a 'Keyword' search box, an 'Include only Organization' dropdown menu with '-- Choose Organization --' selected, and a 'Filter' button. There is a checked checkbox for 'Display systems of all child organizations as well' and an 'Export list' button. A red box highlights the 'Show only upgradeable systems:' dropdown menu, which is currently set to 'version 5.00'.

The next step will be to click on the **Upgrade to 5.50** button:

Panda GateDefender eSeries

The screenshot displays the Panda Perimeter Management Console. The browser address bar shows the URL `https://managedperimeter.pandasecurity.com/system.php`. The console header includes the Panda logo, a 'Log out' link, and the 'PANDA SECURITY' logo. The main navigation bar contains links for 'My Account', 'Systems', 'Activationcodes', 'Actions', 'Accounts', and 'Downloads'.

Systems Page Overview:

- Systems:** 1434 Firewalls (total), 850 are online, 788 need to be updated, 646 are up to date, 316 are expired.
- Service Status:** All services are online. More information and service status updates are available.
- System Status Legend:**
 - System is up to date
 - System is outdated
 - System phones home
 - System is dead
 - System status not available
 - System is enabled
 - System is disabled

Systems Table:

This is a list of all systems you're allowed to administrate. Multiple systems may be scheduled for upgrade, by simply activating the checkbox on the left side of each System, and then clicking 'Upgrade systems' button.

Filter:

Keyword: Include only Organization: Filter

☒ Display systems of all child organizations as well

Show only upgradable systems:

Table:

	Access	Support	Actions	Status	Name	Serialnr.	Updates	Model	Owner	Maintenance valid till
<input type="checkbox"/>					Arantzazu	N04B-K56DR0-53040	Upgrade to 5.50	None	Integra eSoho	29.06.2014 - Add Maintenance

Buttons: Upgrade systems, Delete expired demo systems

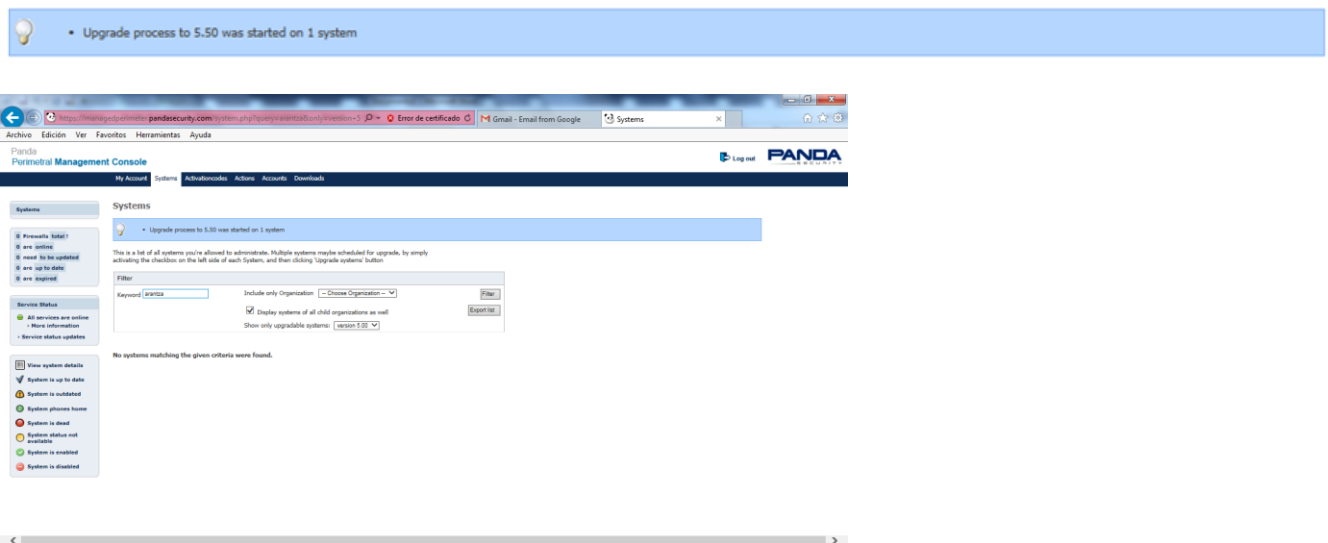

Page Info: 1 - 1 of 1

A summary screen will show the systems that are are selected for upgrade. Click on the

Upgrade NOW! button:

A message confirming that the upgrade process has started will then be displayed:

The Actions tab will indicate whether the upgrade process was successfully executed, failed or is still pending.

The screenshot shows the Panda Perimeter Management Console interface. The 'Actions' tab is selected, displaying a list of pending actions. The interface includes a sidebar with navigation options and a main content area with a table of actions.

Left Sidebar:

- Pending actions** (selected)
- Failed actions
- Completed actions
- Archived actions

Service Status:

- 1434 Firewalls (total)
- 849 are online
- 788 need to be updated
- 646 are up to date
- 316 are expired

Main Content Area:

Pending actions

The following actions are still pending.
By clicking on 'Archive action' you can hide these actions for further sessions, though they are still available in the 'Archived actions' section.

1 - 30 of 62

Action	Systems	Succeeded	Failed	Pending	Total
<input type="checkbox"/> Package upgrade	Pending systems -> Branza	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> Coruja	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> JE-TEST9100	0	0	1	
<input type="checkbox"/> Updating channels	Pending systems -> JE-TEST9100	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> PGO-MRAY	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> 10032902 - GABINETE PROFESIONAL DE SERVICIOS EMPRESARIALES HERAS S.L.	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> 10032902 - GABINETE PROFESIONAL DE SERVICIOS EMPRESARIALES HERAS S.L.	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> CanatSB	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> 10113181-BLANOS FERRICOS S.A.	1	0	1	
<input type="checkbox"/> Package upgrade	Completed systems -> 10035416 - LA UNION RESINERA ESPANOLA S.A.				
<input type="checkbox"/> Package upgrade	Pending systems -> CanatSB	0	0	1	
<input type="checkbox"/> Package upgrade	Pending systems -> PAMM-ECO	0	0	1	

Software Appliance upgrade

If you have a Software Appliance, you'll need to burn the software appliance image either to a CD/DVD or a USB stick. The image comes in ISO format as well as in IMG format, so you can decide which way is more suitable. In both cases, the image installation process is attended.

Please follow the instructions in **Annex 1. How to burn HW/Software Appliance USB images into a USB device** to create the bootable USB.

Once you have the bootable CD/DVD/USB, you'll need to change the boot order in the BIOS to start from the corresponding device, load the image and install.

Virtual Appliance upgrade

The .zip file created for the virtual appliance installation contains three .txt files with the instructions for installation in KVM, VMWare and Xen/Citrix.

Backup import and machine upgrade

This step needs to be followed only in the case of image reinstallation (as opposed to a package upgrade).

After installing the image, import the backup into the appliance. This will include the activation code information, so you will not need to activate the appliance again.

Once this step has been done, you will still need to update the Base Channel from the Panda Perimetral Management Console using the option **Upgrade to 5.50** in order to configure the correct Base Channel version. Systems using version 5.00.10 use an activation code associated with a Panda GateDefender 5.00 Base Channel, whereas systems with version 5.50 need to use Panda GateDefender Hardware eSeries 5.50 Base Channel to correctly install future updates.

Refer to the **Package upgrade** section in this document to check the necessary steps.

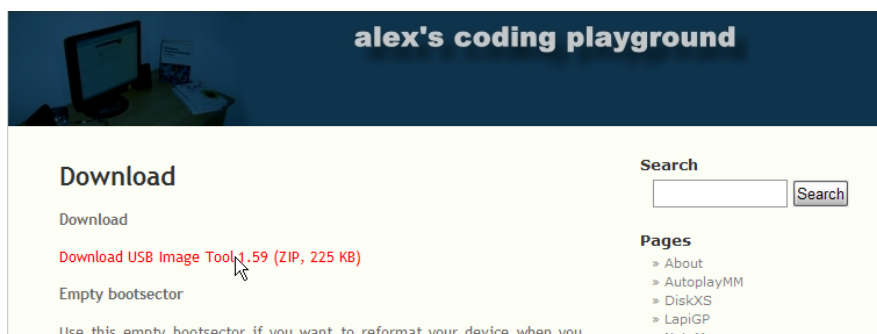

Annexes.

Annex 1. How to burn HW/Software Appliance USB images into a USB device

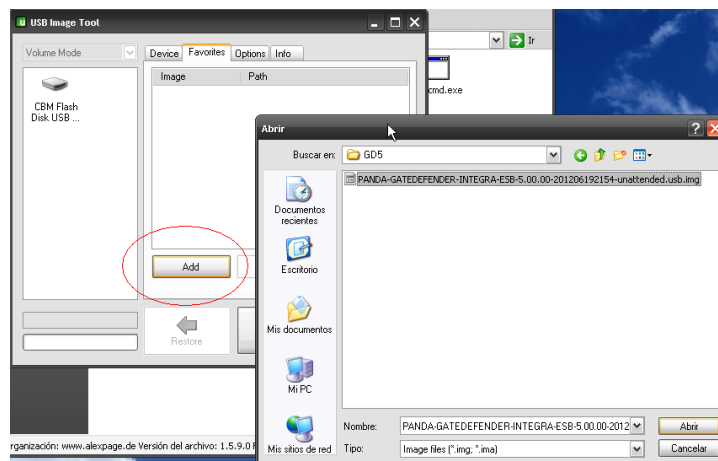

This procedure is valid to burn Integra eSoho USB images for the Integra SB model and the Integra eSB USB image for the Performa SB model. You need to burn a USB device for installation of the unattended version.

To burn the image to the USB drive, download the required application from the following address:

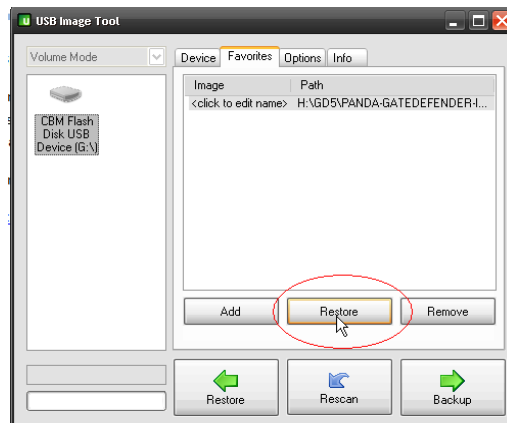

<http://www.alexpage.de/usb-image-tool/download/>

Once you have the image and the USB drive is connected, run the application. In the “Favorites” folder, click the Add button and select the downloaded image.

Then, select the USB device and the image and click Restore. At this moment, the created partition will not be accessible from Microsoft Windows.
