

CASE STUDY

San Sebastián de los Reyes Local Council

Spain

Details

Company: SS de los Reyes Local Council
Client size: Large company
Country: Spain
Sector: Local public administration
Products: Panda Security for Enterprise
Licenses: 650

Benefits

- **Protection for critical and sensitive information.** Protects critical and sensitive information from data leaks, targeted attacks and unknown malware thanks to its advanced behavioral analysis and proactive protection.
- **Regulatory compliance.** Helps implement enterprise regulation compliance by managing security policies with application control and network access control.
- **Reduces complexity.** The easy-to-use centralized management console controls all endpoints from a single location.
- **Increases employee productivity.** Drastically reduces spam and helps control the use of unproductive or restricted applications and deletes undesired content.
- **Improves risk management.** Thanks to the dashboard and to a complementary in-depth audit service capable of uncovering hidden malware.
- **Full services.** Full assistance; 24 hours a day, 7 days a week, all year around.

Panda Security for Enterprise

"The security provided by Panda Security for Enterprise guarantees citizens' satisfaction and peace of mind when dealing with local administration".

Alicia Herrero Fernandez
New Technologies and Processes Service Director.
San Sebastián de los Reyes Local Council.

Why Panda Security?

About San Sebastián de los Reyes Local Council

San Sebastián de los Reyes is a Spanish town in the Community of Madrid, located 18 km north of the capital of Spain.

The town administration is run by the local council, which includes the Municipal Corporation consisting of twenty-five town councilors.

Like many towns close to Madrid, San Sebastián de los Reyes underwent a disproportionate growth during the sixties and seventies due to migration from rural areas. Since the mid-nineties immigration from other countries has also increased the town's population.

Requirements

In order to manage and expand its resources and respond to the requirements raised in the last ten years as a consequence of the increasing number of citizens, San Sebastián de los Reyes Local Council undertook an ambitious project.

All local institutions had to be coordinated correctly if the relationship between citizens and local administration was to be simplified and improved. In practice and in the technological environment, this involved joining different areas with a fiber optic ring, providing speed and security to the IT structure.

Solution

Panda Security for Enterprise

Panda Security for Enterprise is a security solution designed for companies that have greater diversity across the network layers and require global protection for all components of the network.

It is centrally managed thanks to the AdminSecure administration console, which allows monitoring of all the network assets, protecting them against all types of threats and optimizing productivity.

The administrator can distribute policies to all the computers, and block access to restricted applications or specific files from the central console. This ensures corporate policy fulfillment and optimizes employee productivity.

The various modules included offer the best protection level for the different network structures.

Why choose Panda Security for Enterprise?

- The most advanced intrusion protection system.
- In-depth malware audits.
- Unified centralized console.
- Collective Intelligence.
- Complete service package.
- Maximizes return on investment.

The solution: Panda Security for Enterprise

The council's choice of the Panda Security for Enterprise solution in 2000 provided complete peace of mind and **minimum impact on its daily relationships with citizens** from the outset. *"When handling citizens' confidential information, you have to be extremely careful and comply with security policies and rules in order to guarantee their privacy. With Panda Security for Enterprise we know we can rest assured"*, explains Alicia Herrero, New Technologies and Processes Service Director.

Thanks to its **network access control**, Panda Security for Enterprise prevents infected, non-secure or dangerous systems from connecting to the network and contaminating files and data.

As it is a **modular solution**, the protection provided by Panda Security for Enterprise adapts to the council's organizational structure. It is **extremely easy to manage**, it offers protection for different Windows and Linux operating systems, and it is highly reliable due to its network layer system with TruPrevent preventive technology.

"Since we installed Panda Security's solution, we haven't had any virus infections. As our systems are thoroughly protected, the council's administrative resources are always available for citizens", concludes Alicia.

One of its main features is that of **auditing the IT resources at any time** in order to prevent vulnerabilities in systems and to check they are correctly configured and updated.

Another key element regarding the infrastructure and a long-term relationship is **support**, especially on purchasing a security solution. At this point, it doesn't look like there are many queries. As put by Alicia: *"There is nothing to question about Panda Security's support, neither from a human nor a technical point of view"*.
