  It prevents infected, dubious or dangerous computers from connecting to the network and infecting information and files.

"Since 1995, when we first implemented Panda Antivirus in Grupo Amper, we have witnessed year after year just how shrewd that initial decision was".

Manuel Fernandez
IT Director

Grupo Amper S.A (http://www.amper.es/) is one of the most important companies dedicated to the design and implementation of global civil and military communications solutions. Due to its activity, network security and information privacy is vital for the group.

Grupo Amper S.A. has relied on Panda Security solutions for 14 years to protect more than 800 computers across its corporate network.

"Since 1995, when we first implemented Panda Antivirus in Grupo Amper, we have witnessed year after year just how shrewd that initial decision was", explains Manuel Fernandez, IT Director at Grupo Amper S.A. *"The Panda icon has become a familiar part of our computers, offering the security we need to get on with our work, in an era in which we are all vulnerable to the countless threats in circulation".*

The continuous evolution of Panda Security products and the ease with which they are installed and managed are among the features most highly valued by Manuel Fernandez, who notes: *"If I had to pick out just one of the ways in which it has helped us over this time, it would be the continuous evolution and dynamism in responding proactively with preventive security to the threats that appear every day. No less important however, are the simple setup process, the centralized tools for real-time updates and the monitoring of all endpoints on the network".*

This centralized management is one of the main benefits offered by Panda Security's corporate products, as it facilitates administration of the solutions, requiring less input from administrators.

About Grupo Amper

Amper is a Spanish multinational listed on the Madrid Stock Exchange. It is a leader in the design and implementation of civil and military global information systems. With more than fifty years' experience in the IT and Communications sector, it delivers innovative products and services to provide for the specific needs of its clients.

Solution

Panda Security for Business

· AdminSecure is the **console for managing** Panda Security's 2008 Corporate Solutions. It is based on **modular, flexible and scalable** architecture. It allows deployment, installation and configuration of the protection modules in multiple versions and network layers.

· **Complete integrated protection** against all types of threats for workstations and file servers. TruPrevent technologies protect **workstations** and **file servers** against all types of malware (viruses, spam, phishing, spyware, rootkits, etc.) in a reactive, proactive and preventive way (HIPS).

· **Application monitoring**. Helps control the use of unproductive or restricted applications and deletes undesired content.

· **Control over network access.** With NetworkSecure technology, it protects the network from computers that do not have an antivirus installed or computers with weak protection..

· **In-depth malware audit** service. Malware Radar detects and disinfects threats thanks to **Collective Intelligence** technologies.

Another important advantage is the continuous information provided by Panda Security to its clients: *"Monitoring and notification of new threats through Panda's Web page and emails, etc., keeps us fully up-to-date on the dangers we face as well as informing us of new products and services"*.

Grupo Amper S.A. currently has 809 licenses of Panda Security for Business, the most complete solution for protecting corporate endpoints. It is designed especially to provide robust, straightforward protection for workstations and file servers, securing the network against malware (viruses, spam, phishing, spyware, rootkits, etc.) and other known and unknown threats.
